Fischer Panda wins DAME Award 2010

The German manufacturer of generating sets and propulsion systems has received the DAME Award, category "*Machinery, propulsion, mechanical and electrical systems and fittings*", for its latest generator, the Panda 45 i.

The DAME Design Award is the most prestigious design competition for new marine equipment and accessories in the world and has been awarded each year on the occasion of the METS show in Amsterdam since 1991.

Prior to this year's METS the jury nominated 63 products out of a total of 130 registrations from 19 countries. "We are glad that we could convince the jury of our highly efficient and, at the same time, environmentally friendly generator," said Jens Langer, Sales and Marketing Manager of Fischer Panda GmbH, "The Panda 45 i completes the very successful series of our generators with inverter technology".

The new 45kVA generator is Fischer Panda's latest development of generators with inverter technology and has been designed for owners of Superyachts and other large marine vessels having varying electrical demands onboard. The 45i is a 45kVA / 36kW marine generator using a modern emissions-compliant diesel engine running between 2200rpm at low electrical load and 3000rpm at peak electrical load. Like the other Panda i generators the voltage and frequency are stable to within 3% and 2% respectively. Astonishingly, the 45i is just one metre long and weighs less than 400kg – this compares to a typical USA-built, old style slow speed set which measures 1700mm long and weighs a staggering 998kg!

Fischer Panda – available through the Australia Distributor – Power Protection Solution P/L
