

Press Release November 2007

Spectra Watermakers release the new Ventura 200T

The new Ventura 200T is energy efficient, light weight, and self regulating. The Ventura is a very affordable compact watermaker with all the great features Spectra has become known for. The unit is easy to install and use, quiet, very energy efficient, and it delivers up to 30 litres of fresh product water per hour in tropical waters above 10c.

It's ideal for installation in limited spaces on cruising and racing vessels. The exclusive Spectra-Clark Pump High-Pressure Intensifier maintains the proper pressures in the membrane throughout a wide range of temperatures and water conditions without any adjustments or loss of product water output. The machine's composite construction is corrosion resistant for superior reliability. Every Ventura comes complete and ready to install. All you provide is the two thru-hull fittings and electrical connection.

The 200T is available in two versions, Manual Deluxe and MPC. The MPC version has the same features as the Manual Deluxe, except the analogue pressure gauge and product flow meter is replaced by the digital MPC 5000 control panel.

The MPC-5000 displays pre-filter condition, feed water pressure, water tank full status (with optional tank switch), product water quality, flow rate and total system hours. Reject water is automatically diverted back to the ocean by the MPC-5000 controller, the desired amount of water fills the storage tanks, the system flushes itself clean and shuts itself off. You can set the controller to keep your Ventura in a fresh water storage state for as long as you like.

The optional patented Z-Brane™ technology eliminates the need for harsh chemicals used to clean and store your watermaker. This revolutionary technology keeps the 200T clean and free of bio-fouling and scaling.
